

Design Pattern Categories

Design Patterns

- Creational: ការបង្កើត Object
- Structural: ការកំណត់ទំរង់របស់វា ដំណើរការ
- Behavioral: លក្ខណៈប្រើប្រាស់វា

Example:

Part 7: Enterprise Examples

Relate patterns to Spring Boot.

Factory

```
@Bean
public ProductService productService() {
    return new ProductService();
}
```

Container creates objects.

ការបង្កើត Object in the spring

boot.

- Builder pattern: ការបង្កើត object

ដែលដោយមិនចាំបាច់មានគ្រប់ធាតុទាំងអស់នោះទេ។

Lombo គឺជាប្រើអានីង

Builder

```
User.builder()  
    .id(id)  
    .name(name)  
    .email(email)  
    .build();
```

- Strategy

អោយតែមានជំរើសច្រើន ហើយយកតែមួយ

ពេល Run time.

Strategy

```
PaymentStrategy  
DiscountStrategy  
NotificationStrategy
```

- Observer

Observer

```
I  
Kafka  
RabbitMQ  
Domain Events
```

- Façade: យើងមាន use case ជាច្រើន ចឹងយើងបែងចែកវាទៅតាមផ្នែកវានីមួយៗ

យ។

Facade

```
AuthService  
  
calling:  
  
LoginUseCase  
ResetPinUseCase  
VerifyOtpUseCase
```

We are already using patterns.
We just don't know their names.

End of Sprint 1

SOLID helps us identify design problems. ¶

Design Patterns provide proven solutions. ¶
