

Class 2

Lesson 7 — Hook Methods

Learning Objective

By the end of this lesson, we should understand:

- What is a Hook Method?
- Why not every step should be mandatory.
- How Template Method provides optional extension points.

Why It Exists

Sometimes a workflow has an optional step.

Example:

Export Report

1. Validate
2. Load Data
3. Format
4. Compress (Optional)
5. Save

Some exporters compress the file.

- សម្រាប់ method template step inside the work flow we can create it for optional

យើងគ្រាន់តែដាក់ keyword abstract ទៅបានហើយ ចឹងសម្រាប់ subclass វាអាចធ្វើការបានហើយ
ដោយមិនចាំបាច់ត្រូវធ្វើការ Overnight

Template

```
public abstract class ReportExporter {
```

```
    public final void export() {
```

```
        validate();
```

```
        loadData();
```

```
        format();
```

```
        compress();
```

```
        save();
```

```
    }
```

```
    protected void compress() {
```

```
        // optional
```

```
    }
```

```
    protected abstract void format();
```

```
protected void compress() {  
    // optional  
}  
  
protected abstract void format();  
  
private void validate() {  
    System.out.println("Validate");  
}  
  
private void loadData() {  
    System.out.println("Load");  
}  
  
private void save() {  
    System.out.println("Save");  
}  
}
```
